THE PERFECT SPOT FOR GREAT VINES

Lake County Grapevine Nursery is tucked away at the end of a picturesque valley. This isolated location, the northernmost of California's grapevine nurseries, allows us to produce healthier, more disease-free vines for our discerning, value-focused customers.

ROOTED IN TRADITION, FAMILY OWNED, FAMILY OPERATED

Eckhard Kaesekamp has over 20 years of experience in the grapevine industry. He oversees daily operations with a philosophy that combines time-tested traditional vine growing techniques and the best of modern approaches. Eckhard and his family live on the premises and take a thoroughly hands-on approach to the business. When Eckhard is not on the grounds, in the greenhouse or personally tending to the vines, he is visiting master nurserymen around the globe to expand his knowledge. Carrying on the family's German traditions of precision and efficiency, Eckhard's son, Benjamin, and other family members are also deeply involved in the business.

AT THE NURSERY

The LCG Nursery is home to 250 acres of well-drained sandy loam for the production of dormant benchgrafts and rootings. We have 55,000 square feet of greenhouses, a robust production facility, plus 15,000 square feet of cold storage.

Our high elevation provides us with a cooler climate in the fall and early winter months. This exposes our vines to naturally low temperatures, guaranteeing exceptional dormancy. The lower temperatures also help control diseases, especially Pierce's Disease.

WE HAVE WHAT YOU NEED

We offer growers an exceptional selection of grape varieties, clones, and rootstocks as dormant benchgrafts, potted green-vines or rootings, as well as own-rooted material.

THE LCG DIFFERENCE

We offer a unique combination—a family-run, full-service nursery with the best facilities and equipment available, plus the care, attention and dedication to personal service others can't match. All in an absolutely ideal location.

PERSONAL ATTENTION

No middlemen here. You want answers? You want action? Talk to us. We'll be there for you—today, tomorrow and for years to come.

HOT WATER TREATMENT

All rootstock and scion wood cuttings undergo hot water treatments in strict adherence with the latest UC guidelines. This ensures that any latent pests are eliminated.

SORTING AND GRADING

We always apply the highest quality standards to our grapevine grading process. The graft union must be thoroughly calloused and include a rigorous shoot as well as a well-established root system. In addition, every vine gets the LCG 'thumb-test' ensuring a viable graft union.

MOTHER BLOCKS

We operate our own rootstock and scion wood mother blocks. We also purchase from carefully selected Northern California vineyards.

SANITARY STANDARDS

We always use the best possible materials for grapevine production. During the cutting process, the grapevine cuttings and final product undergo comprehensive sanitary treatments.

NUTRITION

The nursery currently subjects mother vines to routine tissue analysis for both nutritional levels and viral cleanliness. During the growing season the field-grown nursery stock is supplied with a unique nutritional program to increase the strength of the cell walls as well as the immune and health system of the vine.

SUSTAINABLE PRACTICES

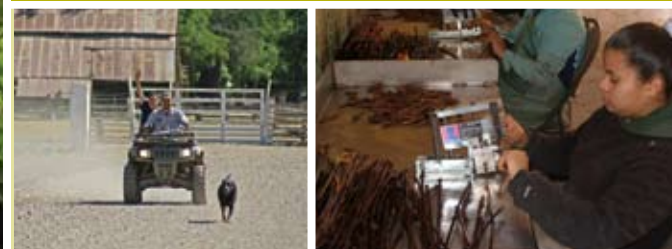

We plant our field nursery into virgin soils to ensure cleanliness and more natural growth which reduces inputs and ultimately results in healthier vines.

POTTED GREEN-VINES

LCG uses Jiffy Peat Pellets for establishing strong, healthy root systems. The pellets help prevent root deformation and produce a larger fibrous root mass with faster establishment and better performance in the field.

We have discovered this pellet is the best material for our potted green-vines, providing the best opportunity for your success to take root!
